

Independent Security Review — Outreach

Request for a free/no-cost penetration test or vulnerability assessment

Hello,

I'm the founder of [Havenote](https://havenote.health), a clinical documentation SaaS for outpatient clinics: a clinician records a patient visit in-browser, the audio is transcribed, an AI drafts a structured clinical note, and the clinician reviews, edits, and signs it. I'm building and operating this solo, and I'm reaching out because I need an independent security review before real patient data goes through the system, and don't have budget for a paid engagement right now.

Organization	Havenote
Website	havenote.health
Sector	Healthcare / Public Health (clinical documentation SaaS)
Stage	Pre-launch — no external clinic signed as a pilot partner yet, no real patient data onboarded
Team size	Solo founder
Contact	Barseh Gbor, Founder
Email	barsehgbor@havenote.health
Phone	267-650-8475

Assets in scope (proposed):

- <https://havenote.health> and <https://app.havenote.health> — React SPA frontend
- <https://api.havenote.health> — backend API (AWS Cognito authentication, mandatory MFA)

A fuller written scope document is available on request — attack surface map, architecture notes, and a list of vulnerabilities already found and fixed internally, so a reviewer's time goes toward what hasn't been checked yet rather than rediscovering known issues.

I'd welcome the chance to talk through scope and timing whenever is convenient. Thank you for considering a startup that can't afford a paid engagement right now.

Best,

Barseh Gbor

Founder, Havenote

Havenote is a HIPAA-context clinical documentation platform currently in pre-production security hardening. This document accompanies outreach to prospective independent security reviewers (e.g. CISA Cyber Hygiene Services, university cybersecurity clinics, startup-focused pentest programs).
